Tandem Energy

We are more powerful together

At Tandem Energy, we take a holistic approach to energy and environmental management, providing integrated, realistic, and innovative solutions to help our clients reduce energy costs and greenhouse gases now and in the future.

Improving our clients' bottom line through energy efficient and sustainable practices is our key focus. By incorporating education and behavioural change into your workplace, we can help you empower your workforce to achieve **significant and lasting change**.

Who We Are

By South Australians, for South Australians

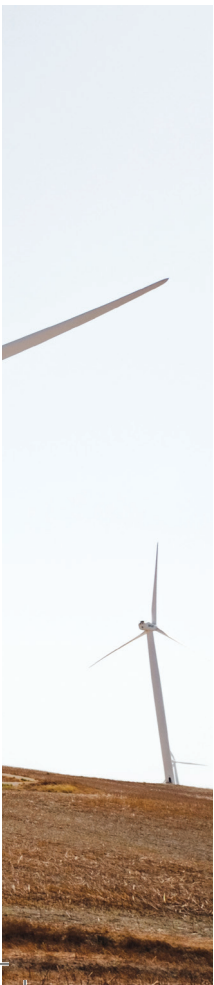

Tandem Energy is a privately-owned **South Australian** energy solutions business, servicing clients in SA and across the country.

We are a team of specialists, dedicated to delivering sustainable results to benefit business, industry and the environment.

Our team consists of experienced and qualified auditors, engineers and sustainability consultants. Our strong team and extensive network ensures that we have the capacity to deliver results to scale.

Collaboration and partnerships are essential for a sustainable future and effective service delivery, and as a founding member of the Net Zero Services Alliance, a collaboration with other energy and carbon specialists, we provide the capacity and expertise to deliver strong environmental results to scale.

Our Values

Collaboration and trust are key

We know we need to act now and act fast to reduce the impact climate change will have on our society.

Energy use is the greatest contributor to our greenhouse gases and the most effective way we can create change. This is why we are passionate about energy security and efficiency.

We choose to work in *tandem* – with our clients, services providers, local and state governments, to achieve optimal outcomes. We demonstrate this through our work and partnerships, such as our engagement with Carbon Neutral Adelaide as a founding partner, and the Net Zero Services Alliance.

Collaboration is key to everything we do. We are your trusted partner in achieving continual and effective energy savings and sustainability outcomes.

Our Capabilities

Diverse skills and experience

Our team have a diverse range of skills, accumulated over many years of hands-on workplace involvement, formal study, and ongoing research.

Collectively, we hold qualifications in:

- Electrical, Civil and Environmental Engineering
- Climate Active registered consultants
- PV Solar design accreditation (Clean Energy Council)
- Certified Monitoring and Verification Professional (CMVP)
- Master of Sustainability
- Permaculture Design
- Home Sustainability Assessment
- Business Sustainability Assessment
- Training, Assessment and Facilitation

Our Services

Understand, plan, implement, manage

Energy Health Check

It is important to understand the current energy situation of your business as well as the opportunities available to reduce energy use. An Energy Health Check is the simplest way to discover how your business is currently using energy and to identify potential savings.

Sustainability Scan

Is energy your main cost and environmental concern? Is it water, or greenhouse gas emissions, or chemicals? Our sustainability scan can help you identify the preferred pathway to setting and achieving your sustainability goals.

Energy Auditing

We follow the Australian/New Zealand Standard AS/NZS 3598:2014 for type 1,2 and 3 energy audits. Having completed audits for businesses in industries such as manufacturing, winemaking and resource recovery, we have an extensive knowledge base in industrial and commercial applications to advise resilient and effective solutions.

Climate Active carbon neutral certification

Our staff are Climate Active registered consultants, and our organisation is also certified using this process, so we are well placed to help you achieve carbon neutral status for your own operations.

Procurement and Support

We provide assistance in all aspects of project support and implementation. Discovering how you use energy is an important first step towards realising energy savings, but implementing solutions provides the results.

Training and Workshops

Our team of qualified facilitators provide tailor-made and audience appropriate energy and sustainability training for all stakeholders.

Renewable Integration

Using the latest software we can size and design renewable energy solutions in line with your energy demands.
